# Universal on-site service tool

## HENRI<sup>+</sup>

The NRI HENRI<sup>+</sup> is the flexible service tool for easy 'on-site' update & configuration of coin & bill acceptors. The high memory capacity results in a universal programming solution for different validator models.

### Fast and easy settings:

- Multiple device and coin configuration updates for coin validators
- Plug-and-play solution for immediate use
- Diagnostics of status and error messages
- Display of current software status of the validator

### High performance:

- High memory capacity for various coin and configuration data sets reduces need to have different devices for updating the NRI coin validators G-13.mft/ G-40.ft as well as CashCode One<sup>™</sup>
- Reliable and powerful Linux platform

### Security:

- Firmware and configuration update only possible by protected access via SIM card
- Firmware and configuration update with back-up function
- Undervoltage detection to guarantee correct operation
- Transmission control and CRC check-sum scan

### Flexibility:

- Only one Tool needed for:
  - Updating of G-40, G-13; as well as CashCode one<sup>™</sup>
  - Future NRI & CashCode products
- Power supply from machine/ wall power supply or stand-alone via USB-interface

### Easy handling:

- Full graphical display with intuitive navigation structure for ease of use
- Different menu languages selectable

### Technical data:

Interface:	SIM lock card for licence validation, CashCode BlueChip technology, USB interface Master/ Slave, SD flash card for Linux, data sets and firmware
Power Supply:	Machine/ external power supply
CPU:	ARM9 208 Mhz
Memory:	NAND flash with 512Mbit, SDRAM with 512Mbit, 1 GB micro SD card (upgradeable to 32 GB)
Clock:	Real time with backup battery

With the NRI HENRI<sup>+</sup> service module you and your application are prepared for the future
