# Universal audit retrieval solution

The currenza audimax is the universal audit retrieval solution that makes audit easy – no matter which vending machines you have or protocol you are using.

## Profitability:

- Unified data collection – even from mixed machines in the vending park
- Optimised for retrofitting vending machines with an easy audit unit
- Unification of data, which up to now were often only available in different formats – now there's one standard and retrofitting becomes easy
- Product, cash flow and machine revenue information independent of the machine protocol
- Comprehensive cashless functionality also available from the same hardware

## Flexible data retrieval:

- Easy data collection from audimax using different devices
- Standard: data readout via data key via included antenna device
- Further data retrieval units:
  - NRI USB Audit Stick: readout via IrDA or printer cable
  - **currenza G<sup>2</sup> airport**: readout via integrated GSM module in the c<sup>2</sup> coin changer
  - Handheld: read-out via DEX protocol

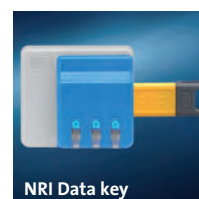

## Comprehensive data provision:

- Enhanced data field preselection via free of charge Audit Manager software
- Data provided in standard EVA-DTS or Excel format

## Supplied data:

- Cash flow data from the payment systems via MDB
- Vending machine data via Exe, BDV, MDB

With currenza audimax audit you need only one system for all machines. Auditing has never been so easy and cost efficient.
